Practice12: Matplotlib

Question01

Draw a figure with three subplots of histograms for avg_glucose_level. The first is for people without a stroke, the second for people with a stroke, and the third for everyone.

Question02

Draw a box plot for the age column to check if there are any outliers. Save the plot as an image.

Question03

Divide the avg_glucose_level column into three categories:

- Low: less than 100
- Medium: 100 to less than 140
- High: 140 or more

Then, create a bar chart showing how many people are in each category.

Good luck
