Practice01: String and Condition

Question01

Write a program that takes a text from the user and checks if the word "patient" is in the text. The result must be a boolean value (True or False) without using any if statements.

Question02

Write a program that takes a string from the user and prints its first and last characters. Then check the length of the string: if the length is odd, print the middle character, and if the length is even, print the two middle characters.

Question03

A patient’s record number is given as a string, for example "MRN2025".
Write a program that checks whether the string starts with "MRN".

- Print "Valid medical record number" if it starts with "MRN".
- Print "Invalid code" otherwise.

Question04

- Write a program that takes a patient's weight (kg) and height (m), calculates the BMI and prints the correct category:
  - BMI ≤ 18.5 : "Underweight"
  - 18.5 < BMI < 25 : "Healthy weight"
  - 25 ≤ BMI < 30 : "Overweight"
  - 30 ≤ BMI < 35 : "Obese (Class I)"
  - 35 ≤ BMI < 40 : "Obese (Class II)"
  - BMI ≥ 40 : "Obese (Class III)

Good luck
