Practice02: Loop

Question01

Ask the user to enter a DNA sequence.

- If the sequence contains any character other than A, T, G, or C, print an error message and ask again.
- If the sequence is valid, create and print its complementary DNA.

Question02

Write a program that asks the user to enter a patient's age.

- If the age is less than 0 or greater than 120, show an error message and ask again.
- The program should continue until the user enters a valid age.
- When a valid age is entered, print: **"Age accepted: X years"**

Question03

Write a program that asks the user how many patients visited the hospital today. Then, for each patient, create and display a unique ID number in this format:

P0001
P0002
P0003

Good luck
