Practice06: Dictionary

Question01

Show the difference between using get and direct access [key] in a dictionary.

Question02

Create a dictionary with patients' names as keys and their blood pressure readings as values and check if 'Ali' is in it, removing him if he exists or adding him with a reading of 120/80 if he does not.

Question03

"Create a dictionary of 5 nurses with their nurse IDs as keys and the number of shifts they worked last week as values, then use a for loop to print each nurse's ID and number of shifts.

Good luck

Never give up, never stop learning
